Experience

Applied AI Engineer, *Tanium* Dec 2025 – Present | Durham, NC

Build and ship Go-based LLM agent systems for Tanium Atlas and Tanium Ask, customer-facing GA AI products on Tanium's enterprise platform supporting 35M+ endpoints worldwide, including 40% of the Fortune 100.

- Atlas Plugins Lead, owning technical design and delivery of reusable agent capabilities across production agent workflows, including custom memory systems, semantic layers, context management, vector search, and vector database integration.
- Rebuilt Tanium Ask v3 into an agentic system in Go, improving answer correctness and action quality through multi-step task planning, tool selection and execution, context propagation, and integration with agent evaluation and observability workflows.

Senior Software Engineer, *Fortress Information Security* Oct 2023 – Nov 2025 | Remote

Promoted from Software Engineer in Apr 2025.

- Owned and architected Python backend for an AI monitoring platform; built scalable third-party cyber risk management services that reduced risk management costs by 90% for critical-infrastructure security programs.
- Led backend rewrite for shared platform supporting 3 company products, using TypeScript and asynchronous queues to offload long-running processes and improve frontend responsiveness.
- Built full-stack Vulnerability Management application from alpha to production-ready state across Node.js and React.js, reducing MongoDB data transfer by 50% through optimized database projections.
- Developed internal automation tool using Go and Bash that reduced local developer environment setup time from 2 hours to 15 minutes.

Co-Creator, Software Engineer, *Triage* Aug 2022 – Sep 2023 | Remote

Triage is an open-source proxy for Apache Kafka that addresses head-of-line blocking from poison pill messages and non-uniform consumer latency. It enhances parallel consumption.

- Led core development using Go, gRPC, and AWS (Fargate/ECS), leveraging Go channels and goroutines for high-concurrency message processing and implementing DynamoDB dead-letter store for poison pill message handling.
- Built supporting ecosystem including thin client library, Node.js CLI tool (npm package), Docker containerization, and automated AWS CDK infrastructure deployment.
- Delivered 10x improvement in connections per Kafka partition through parallel consumption architecture.
- Authored technical case study showcasing Triage, available at team-triage.github.io/case-study .

Software Engineer, *Open-Source Projects* Aug 2020 – Jul 2022 | Remote

- Built multiple open-source projects including Request Djinn, a webhook inspector enabling developers to receive and analyze webhook payloads during testing and development, using TypeScript, Express & PostgreSQL.

Skills

Go | **Python** | **TypeScript** | **Databases** — SQL, NoSQL, PostgreSQL, MySQL, MongoDB, Redis | **LLM Agent Orchestration** | **RAG** | **LLM Evaluations** | **REST APIs** | **Docker / Containerization** | **Testing** — Unit/Integration/Regression | **AWS Cloud** | **Linux** | **Microservices** | **Git** | **CI/CD** | **Message Queues** | **Apache Kafka** | **Event-Driven Architectures** | **Infrastructure as Code** — Terraform, CDK, CloudFormation | **HTTP** | **gRPC** | **Nginx** | **Bash** | **Agile Methodologies**

Education

M.B.A, *Univ. of Pretoria/Gordon Institute of Business Science* 2012

B.S. in Computer Science, *Univ. of the Witwatersrand* 2009
